Professional Summary

Final-year BSc Computer Science student specializing in networking, cybersecurity, Linux administration and secure software engineering. Experienced with Wireshark, Zeek, Suricata, Splunk, Bettercap, Cisco Packet Tracer, Docker and cloud deployment. Built security-focused solutions including a SOC log analysis pipeline, Retrieval-Augmented Generation (RAG) microservice and enterprise web applications. Seeking a SOC Analyst role focused on network monitoring, incident response and threat detection.

Education

Eduvos — BSc Computer Science (Expected Dec 2026)

Relevant modules: Computer Networks & Security, Advanced Networking, Linux, Cloud Technologies, Database Systems, Data Structures & Algorithms, AI Ethics, Generic Algorithm Design.

University of Johannesburg — Mathematical Sciences (Discontinued)

UJ AI in the 4IR — Completed 2022

Awards

- Eduvos Computer Science Top Achiever Award
- Academic Excellence Award

Certifications

- Fortinet Certified Fundamentals in Cybersecurity (FCF – formerly NSE 2)
- Cisco Network Support and Security
- Cisco Introduction to Cybersecurity
- Cybrary Security Ticketing
- Deloitte Australia Cyber Job Simulation
- Deloitte Australia Technology Job Simulation

Technical Skills

Networking & Security: Wireshark, Zeek, Suricata, Splunk, Bettercap, TCP/IP, VLANs, VLSM, NACLs, SIEM Fundamentals, IDS/IPS, Threat Detection, Incident Investigation, Network Monitoring.

Programming: Python, Java, PHP, JavaScript, HTML, MySQL, C#, Bash.

Frameworks: FastAPI, Flask, Spring Boot, Laravel.

Cloud: Docker, Railway, Netlify, Supabase, Vercel, Git.

Experience

IT Systems Administrator Intern – Mmakgano Laboratories

Maintained Windows systems, applied security patches, provided remote support, troubleshoot infrastructure and networking issues, and assisted with endpoint administration.

Key Projects

SOC Agent Pipeline: Linux-based security monitoring solution using Zeek, Suricata and Ollama for log normalization, threat detection and incident reporting.

RAG AI Microservice: Standalone FastAPI Retrieval-Augmented Generation service using ChromaDB and Groq to provide grounded AI responses from policy documents and live product data through a decoupled microservice architecture.

Bater Marketplace: Full-stack PHP MVC marketplace with Docker deployment, Railway backend, Netlify SPA frontend, role-based authentication and secure API integration.

Additional Projects: Cloud-Based Pathology Testing System, Mmakgano Labs Information System, Dev Drop peer-to-peer sharing application and PowerShell File Organizer.

Core Knowledge

SOC Operations • Incident Response • Threat Hunting Fundamentals • Enterprise Networking • Linux Administration • API Security • Secure Software Development • REST APIs • Cloud Fundamentals
